

MODULE Store Locator

A module for websites representing businesses with multiple stores or branches

THE CONTEGRO STORE LOCATOR MODULE HAS BEEN DEVELOPED AS A TOOL TO AID WEBSITE VISITORS TO IDENTIFY THE LOCATION OF YOUR STORE OR PRODUCT IN A SPECIFIC GEOGRAPHIC AREA OF THEIR CHOICE.

It is efficient to use and can provide users with a region-segmented map of a country or the world to start their search from. A user simply clicks on a region to view information on stores, branches or resellers in that area.

This module simplifies the search process, enhancing the usability of your site and directing customers to their most convenient location.

Suitable Applications

- Nationwide/global retail outlets and distributors
- Businesses with multiple branches
- Education centres with multiple campuses
- Restaurants and fast-food chains
- Nationwide government sectors
- Dealerships and Franchises

A targeted search will return relevant results and optional full details page

Key Features

➤ Efficient Quick Search Mechanism

The Quick Search function may be placed in any page within the website providing users with immediate access to store locations. For those businesses with a large number of stores, the search function enables users to narrow their search even further by performing a targeted 'town' or 'suburb' search.

➤ Intuitive Graphic Navigation

The regional or global map is broken down into interactive regions. When a region is selected, a list of stores or branches within that region is displayed.

➤ Comprehensive Store Details

A complete details page can be created to display the full relevant details for each listing, including; contact details, email and website addresses, physical & postal address, custom message and related image, logo or location map.

You are able to specify the level of detailed information displayed to retain control over site content.
